Projects

NON-FUNCITONAL REQUIREMENTS CATEGORIZATION USING NEUAL NETWORKS

- Created a neural network using python that classified non-functional requirements into different categories. The inputs into the program consist of complete sentences describing the requirement. The program is broken up into 2 different parts. Pre-processing and the neural network itself.
- Updated code can be found in my GitHub
- Other projects can be found at jonathanrodriquez.com under the projects section. GitHub Links can be found there to the corresponding Repositories
